## **DETAILED ACTION**

The typo rejecting claims 1-119 is corrected below.

The rejection under section 112, second paragraph is maintained, in part, below:

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 61-67, 71-119 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The structure of the compounds is still indefinite since it is unclear how the PHG groups are bound to the XYZ-C(O) group. Therefore the structure of the PHG group remains unclear.

Applicant argues that the rejection is erroneous since it is not informed by the examples given in the specification. In this regard, the examples in the specification clearly show that the XYZC(O) group is esterified to the hydroxyl groups of a glycerol residue. However, the claims do not require this. In this connection, Applicant is reminded that limitations of the specification are not to be read into the claims.

Moreover, the remarks indicate that the PHG can be some of the following:

Art Unit: 1621

phospholipid (p=2)

However, these structures further confuse the issue of how the XYZC(O) groups can bind to the PHG group in situations such as when PHG triacylglycerol since, based on the above, the PHG group includes the XYZC(O) group, which is not recited in the claims. For example, the claims require that at least 1 XYZC(O) group is bound to the PHG group. But how can one more XYZC(O) group fit into the recited compound if PHG is:

lysophospholipid (p=1)

Art Unit: 1621

or

in the above all OH groups of the glycerol residue are occupied and another XYZC(O) group cannot bind. Therefore, it is unclear how another XYZC(O) group can bind in these situations.

Claim 99 has no steps. This is anew ground of rejection.

The rejection under section 11, first paragraph is maintained, below:

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 61-82, 84-96, 98-101, 116-119 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims include the proviso: wherein Z is a C1-C6 alkyl group when Y is S and PHG is a phosphatidylethanolamine phospholipid or phosphatidylethanolamine lysophospholipid.

However, the specification does not include this sub-genus of compounds and thus the specification does not show that the inventor were in possession of this sub-genus.

Althought Applicant's show support for the separate definitions of Z, Y, and PHG, the specificication does not support the proviso Z is a C1-C6 alkyl group when Y is S and PHG is a phosphatidylethanolamine phospholipid or phosphatidylethanolamine lysophospholipid. This proviso creates a sub-genus of compounds that are not supported in the specification.

The following prior art rejections are withdrawn in favor of the following new grounds of rejection:

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Claims 61, 87, 98-101, 104, 112-114, 116-119 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5151534 (US 534) (counterpart to EP 0342115 in the IDS filed 1/12/2010).

US 534 teaches the following compound that can be esterified to polyhydroxy compounds (such as glycerols) see definitions of R and R<sub>1</sub>.

The compounds can be formulated as emulsions (liposomes) and inhibit formation of arachodonic acid (inflammation), see columns 7+.

After a further review of the prior art, the following new ground of rejection is now entered:

Claims 61 and 87 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al., Journal of the American Chemical Society (1957), 79, 753-4 (Johnson).

Johnson teaches the following compound that anticipates the rejected claims:

See attached DATABASE CAS citation 1957:51648 [retrieved 2 March 2010] on STN; Columbus, OH, USA.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl J. Puttlitz whose telephone number is (571) 272-0645. The examiner can normally be reached on Monday to Friday from 9 a.m. to 5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel Sullivan, can be reached at telephone number (571) 272-0779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
